Thompson Heights Water Supply Corporation

Thompson Heights Water Supply Corporation would like to inform our customers of a temporary change in water treatment by the City of Denison, from whom we purchase our water.

The **City of Denison** will be conducting a **Free Chlorine Conversion** beginning:

- **Start Date:** April 14, 2026
- **End Date:** May 12, 2026

During this period, the disinfectant used in the water system will be temporarily changed from chloramine to free chlorine. This is a common and safe maintenance practice used to help maintain water quality throughout the distribution system.

What This Means for You

- You may notice a **stronger chlorine taste or odor** in your water.
- This change is **temporary** and **does not pose a health risk**.
- The water will remain safe for normal use, including drinking, cooking, and bathing.

Special Considerations

- **Dialysis patients** should contact their healthcare provider for guidance.
- **Aquarium owners** should take precautions, as free chlorine can be harmful to fish.

If you have any questions or concerns, please feel free to contact us.
